Auto Record RDP Mode

UP/DOWN
select location

Initial recording is automatically stored and the second loop immediately overdubs in RDP Mode. Advantage is seamless layering without pausing between the first and second loop to store. Disadvantage is that the Undo does not erase the initial recording, the location must be cleared or deleted to start fresh.

49

press **PEDAL** once
to arm recording
LED flashes RED

start loop -

play initial notes/chords
to start recording
LED solid RED

press **PEDAL** once
to start overdub
LED solid YELLOW

play dub notes/chords
for current overdub
LED solid YELLOW

last overdub is merged but not stored with the previously stored recordings automatically each time a new overdub cycle begins

press **PEDAL** once
to stop recording

playback
LED solid GREEN

hold **PEDAL**
to undo un-stored
current overdub
LED flashes YELLOW

hold **PEDAL** again
to restore undone
current overdub
LED flashes YELLOW

end loop -

und

rEd

press **STORE** twice

hold **FS-MODE** to clear
only after stopped

press **FS-MODE** once
to stop

*press **FS-MODE** once to completely stop recording and playback at any point in the process*

clear is same as undo, will not remove stored recordings
